TOPIC: MOVIE TICKET BOOKING SYSTEM

SYNOPSIS:

A movie ticket booking system is a platform for purchasing and reserving seats for movie screenings. It typically includes the following features:

1. Movie selection: Users can browse and choose from a list of available movies, with information such as showtimes, ratings, and synopses.

2. Seat selection: Users can choose their seats for the movie, either through an interactive seat map or a list of available seats.

3. Payment: Users can make payment for their tickets through various payment methods, such as credit/debit cards, net banking, or mobile wallets.

4. Confirmation: Upon successful payment, users receive a confirmation of their booking, including details of the movie, showtime, seat number, and ticket price.

5. Ticket management: Users can view and manage their bookings through their account or a booking history. They may also be able to cancel or modify their booking, subject to terms and conditions.

Overall, a movie ticket booking system aims to provide a convenient and streamlined experience for movie-goers to reserve their seats and enjoy their favorite films.
